WL270

Quality water guaranteed.

The WL270 delivers superb quality water and satisfies the higher volume needs for chilled and hot water in larger offices and public places. It is specifically designed for use where reverse osmosis is preferred and has the added quality assurance of in-tank ultraviolet light purification. This high performing model guarantees quality water all day long.

Advanced Technology

The WL270 has three core technologies:

High Performance Filtration

This model can be configured with four stage reverse osmosis filtration or multi-stage carbon filtration depending on water conditions. These processes remove water contaminants and chlorine to improve water taste and odor.

In-tank UV

An in-tank ultraviolet light purifies the water and wipes out harmful bacteria to guarantee fresh clean water.

BioCote® Anti-Microbial Protection

BioCote® is a natural anti-microbial protection built in during manufacturing to reduce microorganism growth on the equipment surfaces.

Good for the Earth

Waterlogic coolers have been shown to reduce carbon footprint by up to 55% compared to bottled water coolers.*

Bottleless water coolers reduce plastic bottle contribution to landfills.

The WL270 is ENERGY STAR certified

*EPA Waterlogic 2012, www.phx.waterlogic.co.uk/carbon-reduction-label.aspx

WL270 Features

- Choice of Reverse Osmosis or Carbon Filtration to fit local water conditions.
- Ultraviolet technology eliminates bacteria.
- High water storage capacity for a constant supply of fresh water on demand.
- Gravity-fed storage tank providing additional stored water.
- Drip tray drainage for convenience.
- Contemporary design with simple user interface.

WL200

Clean and refreshing water on demand

The WL200 delivers on a promise of endless refreshing chilled water for your workplace as it features multi-stage filtration and BioCote antimicrobial technology. The business friendly design and guaranteed reliability ensure you have all the quality cold water your employees and guests need.

Advanced Technology

The WL200 has the following core technologies:

1. Filtration: Our filtration technology is really good at taking the bad stuff out and leaving the good stuff in. This stage removes chlorine and other waterborne tastes and odors.*

2. BioCote®: Antimicrobial technology that is proven to be effective against a wide range of microbes such as odor causing and staining bacteria, mold and fungus. BioCote reduces microbes by up to 99.99%**.

*Where applicable
